- My report is not printing/downloading completely, even though I am asking for all the lines. Page 2
- I received a message "No document loaded" on a report that I normally access. Page 3
- I cannot see the searching screen. Page 4
- I am creating a Content View or an Extract, but the report is showing a blank page. Page 5-6
- I am creating a new Content View, but I received an error saying that the name must be unique. Page 7-8
- I clicked on a report and receive the error message "Failed to open the document because there is no text available with the security rules applied". Page 9

My report is not printing/downloading completely, even though I am asking for all lines.

Specially on indexed reports, some users are experiencing that the output has some missing information. We have a problem opened with the vendor, Meanwhile, the work around is to put 0(zero) on the max pages (see screen below). This will insure that all information will be printer/downloaded.

I received a message "No document loaded" on a report that I normally access.

If you get this message on a report that you normally use, it might be that for this particular version there is no information associated with your Agency, Department, County, etc. These are indexed reports and the index is used to present just the information pertinent to this particular user. So, if a county does not have any data in a particular version of the report, then the message will be issued.

Here is an example:

I cannot see the searching screen

This is simple, if you click on the "+" (plus) sign alone, the searching screen will not be displayed. You have to click on the word itself, "Navigation", "NCXCloud", then the search screen will show for you.

I am creating a Content View or an Extract, but the report is showing a blank page.

You create a new Content View or Extract and the first screen that pops up is blank, like the screen below, for now, just go to page two and the report will show for you, see the second screen. We have this issue opened with the vendor and we are waiting for a solution. Meanwhile you can use this work around.

Shows a blank page under "Original Document".

Changing Page to 2 brings the report under "Original Document".

I am creating a new Content View, but I received an error saying that the name must be unique.

You try to create a new Content View and get the message on the screen below. We are working with the vendor to allow multiple names across users. What is happening is that another user created a Content View with this name. The Solution for now is changing to a new name, by adding more information to the name, in the second screen, I added "001" to make the name unique.

Add "001" creates a unique name.

I clicked on a report and received the error message "Failed to open the document because there is no text available with the security rules applied".

In this case, the user does not have the proper authority to access this report, so the user needs to contact the agency to add this report to his RACF ID. DIT cannot authorize an user to access a report, only the agency that owns the report has the authority to do it.
