NC Parcel Boundaries and Standard Fields - Download

Download Link: <http://data.nconemap.gov/downloads/vector/parcels>

Abstract: This digital geospatial dataset represents parcel boundaries with standard core attributes for a collection of parcel data from North Carolina county data producers and the Eastern Band of Cherokee Indians. The Integrated Cadastral Data Exchange project transformed source datasets from county data producers to create a standardized dataset. The individual standardized county datasets were aggregated into a single dataset. The aggregated parcel boundaries include parcels in North Carolina plus lands of the Eastern Band of Cherokee Indians. The source geometry is retained as published by the county data producers. This dataset includes attributes such as ownership, area in acres, assessed value, and other core attributes. The dataset also includes points representing each property, placed at or near the geometric center of the parcel. The dataset includes a common set of attributes.

Purpose: This dataset was generated to publish an aggregated set of parcel polygons for use in various applications across the state.
